

# Tourney® FUNGICIDE

*Tough made easy.*

## Fairy Ring Control

One or more of over sixty different fungi can cause fairy ring symptoms. All of these fungi feed on dead, organic matter (not grass roots) in thatch and soil. As the fungi thrive, the root zone becomes hydrophobic and water cannot penetrate. Ultimately, grass dies from the drought conditions.

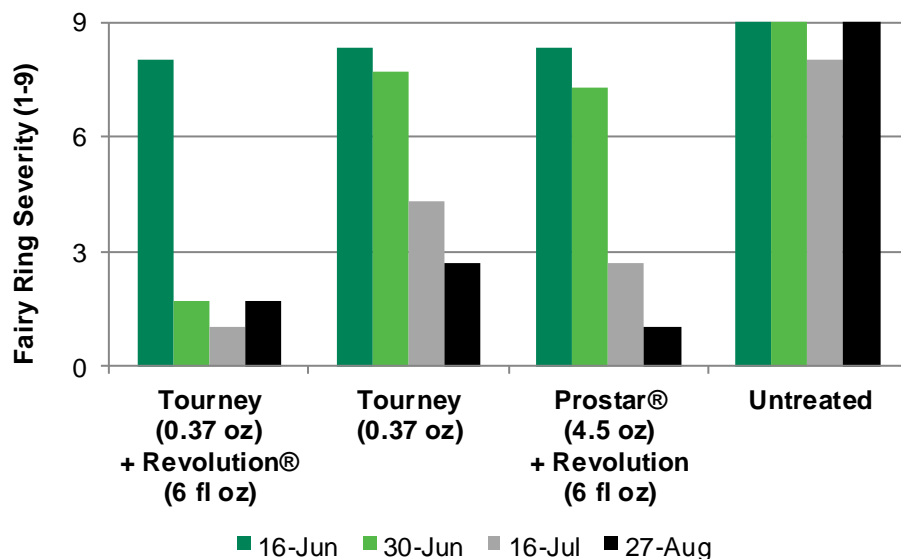

Not only is it important to use an effective fungicide against tough diseases like fairy ring, it is also important to use a product that persists in the soil where the fungi survive. Research has shown preventive and early curative applications of Tourney® Fungicide are effective at controlling fairy ring.

Tourney delivers:

- Outstanding control of fairy ring plus a broad spectrum of other tough-to-control turf diseases such as dollar spot, anthracnose, summer patch, Waitea patch (brown ring patch), brown patch and more
- Exceptional turf quality
- Very low use rates = easier handling and application

Target Diseases	Application Rate	Application Guidelines
Fairy ring	0.37 oz per 1,000 sq ft	<ul style="list-style-type: none"> <li>• Spray timing: When soil temperatures reach 55-68° F</li> <li>• Spray volume: 3-5 gal/1,000 sq ft or by watering in</li> <li>• Spray interval: Re-apply after 21 days to maintain control</li> </ul>

## Early Curative Control of Fairy Ring with *Tourney*

*Tourney* delivers excellent early curative fairy ring control as a standalone application or as a tank mix with Revolution.
